✓📄The API First World

✓✅Quiz #2 Introducing Postman

Your First API Request

✓📄Task: Create a workspace

✓📄Task: Create a collection

🕒📄Task: Get books from the Library API

🔒📄Request-Response pattern

🔒✅Quiz #3: Your First API Request

Request Parameters

🔒📄Variables in Postman

🔒📄Query parameters

🔒📄Task: Search books by genre

🔒📄Task: Multiple query parameters

🔒📄Path Variable

🔒📄Task: Get a book by id

🔒✅Quiz #4: Query vs. path parameters

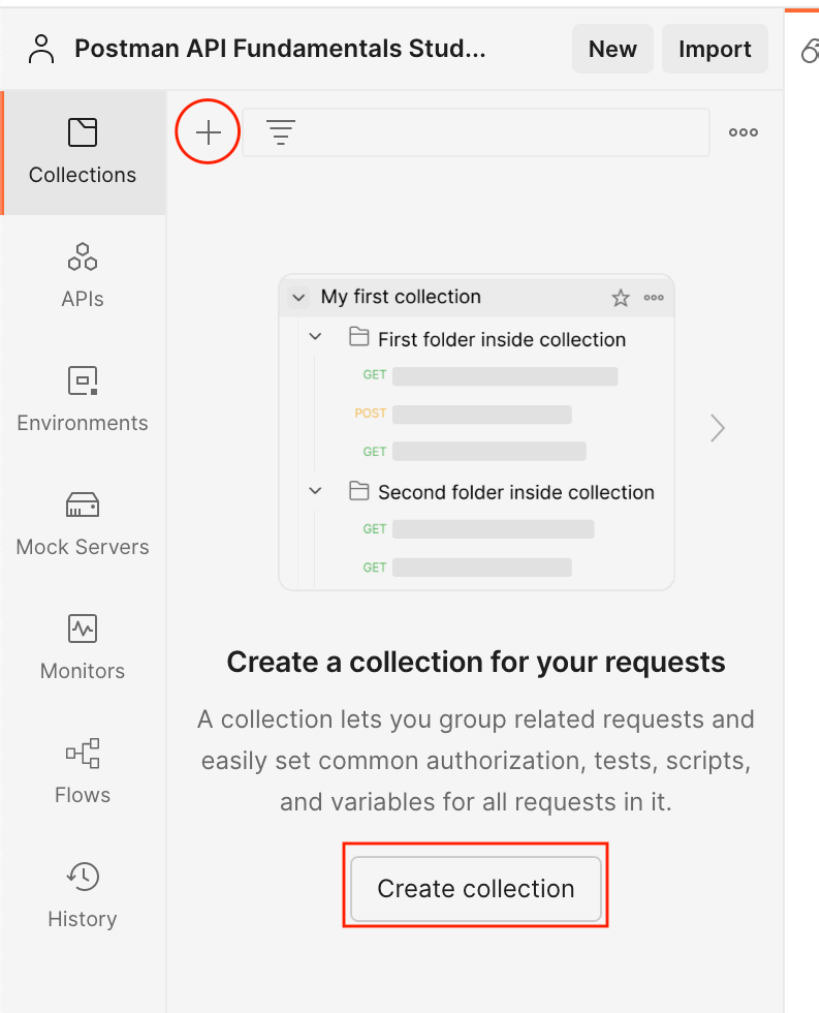

Sending data with POST

Task: Create a collection

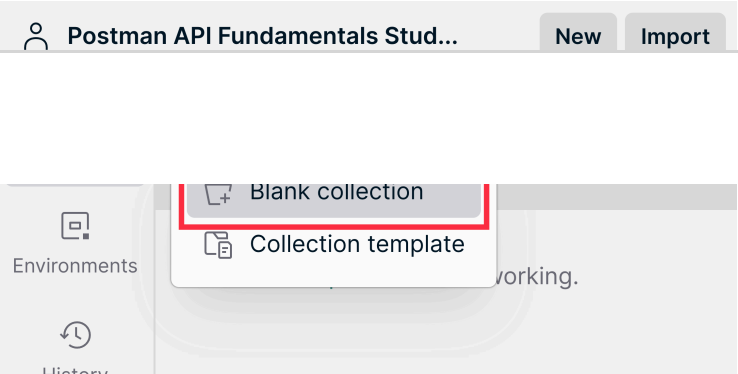

Collections are places to organize your API requests in Postman. They serve as executable documentation of API endpoints.

Let's create a new Collection in our workspace to keep our requests to the **Postman Library API v2**.

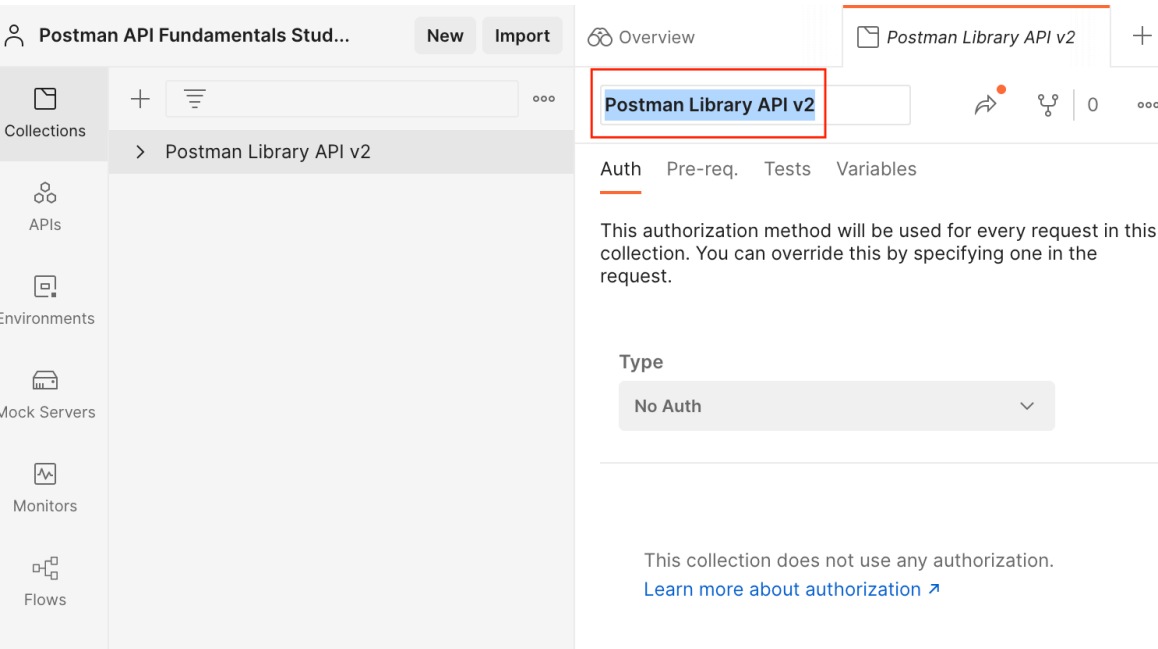

1. From the left pane, either click the **plus ("+")** icon or **Create a collection**.

2. Select Blank collection

3. Name your new Collection **“Postman Library API v2”**

Ready for takeoff 🚀!

Next up, we'll make our first API request.
